

Baumann Floats

The Lightest, Fastest Floats on the Market!!

The BF2550 Float

STC'd on the Cessna 172's & Hawk XP

We put Quality and Performance First!

Increased Gross Weight on 180 HP Skyhawks -- Over 860 pound useful load on pictured 180 HP 172M

- TSO'd gross weight = 2550 lb.
- Actual fresh water displacement = 2470 lb.
- Installed weight including struts and all accessories = 275 lb.
- Length = 16' 11" Max. depth = 2' 2"
- Constructed from 6061-T6 aluminum, including fittings, struts and skins.
- Consist of eight water tight compartments sealed with 3M 5200 caulk.
- Flat top deck with a 10" X 20" storage locker in each float with over 9 cubic feet of volume inside.
- Modern bottom skins are fluted and die formed with compound curves, which eliminates cross bracing and makes them stiffer and lighter. Water spray is turned downward and away from the propeller thus eliminating the need for spray rails.
- Due to our exceptional float design, our floats are set at a minimal downward degree angle, which reduces parasitic drag and makes them faster in the air than other floats on the market.

Baumann Floats

- Spreader bars and struts are easily removed from outside the float.
- Float parts are acid dipped, iridited and zinc chromated prior to assembly.
- Fittings, water rudders, cleats and paddle brackets are anodized for superior corrosion resistance.
- Riveted using half inch spacing on the top rails and chines to ensure a water

tight seal.

- Fluted bottoms ride much smoother in rough water and transmit 15 to 20 percent less load into your aircraft than V-bottom floats.
- Included are dual water rudders, all hardware, struts, spreader bars, steps, cables, flying wires, cleats, paddle brackets, paint and non-skid top deck coating. (*Stripe additional*)
- Other float models manufactured include our;
 - **BF1420** certified on J-3, PA-11 and all side by side Taylorcrafts.
 - **BF2100** certified on PA-12, PA-14, PA-18 and Husky A-1, A1A & A1B.
 - **BF2720** certified on Maule M5, 6 & 7-235 & 260 HP series.
